uvex pronamic product family

Perfect combination of protection and dynamics

protection + dynamic: the uvex pronamic product family lives up to its name.

One of the main goals in the development of the safety helmet was to ensure the positive integration of all functional elements into the helmet design as well as the optimum adjustment to the respective head geometry. In addition to the required standards, our uvex pronamic product family also meets other optional requirements.

Experience the perfect combination of protection and dynamics.

uvex pronamic

Modern safety helmet

This modern sporty helmet not only protects the wearer in their everyday activities, but also features a unique, innovative helmet structure.

Inspired by bionics (namely, the lily pad), a completely new helmet design has been brought to life. This design enables maximum performance and ergonomics using the minimum amount of materials.

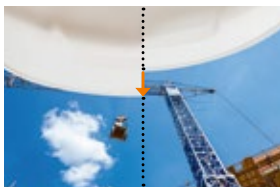

uvex pronamic

Highlights

Optimised headband geometry

Flexible headband with a soft forehead area ensures a comfortable, firm and secure fit.

Long brim

Short brim

Optimal vision

The long brim protects against sunlight, while the short brim allows a greater field of vision.

Extended size range

Variable size adjustment from 51 to 65 cm.

IES system – Now as standard

Convenient resting of the safety spectacles in the helmet.

Maximum ventilation

The fully integrated ventilation sliders are easy to operate even when wearing gloves (not applicable to uvex pronamic E).

Integrated neck support

Ergonomic 'spiderneck' increases the contact surface at the back of the head.

General features

- › side Euroslot adapters (30mm) for attaching earmuffs and visor
- › additional elements allow a wide range of accessories to be attached to the helmet
- › suspension harness with wheel ratchet system for variable width adjustment (9790310)
- › with sweatband (9790311)
- › six-point textile band attachment ensures an optimal fit and maximum comfort
- › adapter for the IES spectacle clip (9772002) included as standard

Positioning closer to head

The optimised shape of the helmet shell means that it rests closer to the head. The helmet feels lighter, because its centre of gravity is shifted to the centre of the head. The enlarged neck area provides greater protection.

uvex pronamic alpine

Well-designed industrial
climbing helmet

With its seamlessly integrated helmet components, the uvex pronamic alpine not only offers excellent protection, but also a sporty, dynamic look.

Whether with visor, neck protection or hearing protection – individual adjustments are made in seconds.

With the uvex pronamic alpine, you are always perfectly equipped, no matter what challenge awaits you.

uvex pronamic alpine

Highlights

Versatile adjustable suspension harness

5-stage positioning of the head ring around the brow.

Simple and quick assembly of the four-point chin strap

EN 12492/breaking force > 500 N; optional EN 397/breaking force 150–250 N (9790021).

Optimised size range

Variable size adjustment from 51 to 63 cm.

Mips® brain protection system

Additional head protection for rotational movements.

Integrated mounting elements for helmet accessories

Retaining clip e.g. for head torches and goggles.

Maximum ventilation

Generously sized ventilation openings on the side of the helmet integrated in the design (does not apply to uvex pronamic alpine E).

- › 2600214 uvex K2P bayonet

uvex pronamic alpine with Mips® brain protection system

Additional head protection for rotational movements

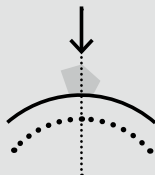

9731531
uvex pronamic alpine Mips®

Especially for industrial safety helmets

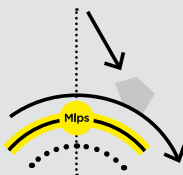

- › designed to reduce the **rotational movements** affecting the head during certain angled and off-centre impacts
- › such **rotational movements** can stretch or shear brain tissue
- › multi-directional movement of the safety system in all directions
- › the low-friction inner shell of the helmet increases wearer comfort
- › improved helmet weight distribution when accessories are attached

Linear impacts

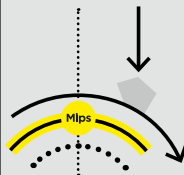

Conventional safety helmets are developed for direct and central impacts (DIN EN 397).

Angled impacts

Off-centre impact

In most cases, however, the impact is lateral or results in an oblique-acting force. The Mips® brain protection system complements the impact absorption of a conventional helmet with its ability to also deflect rotational movements and forces from the head.

uvex pronamic half visors

The uvex pronamic half visor offers optimum protection and can also be worn comfortably with prescription spectacles. When not in use, the visor locks securely over the helmet shell. It can be easily removed from the helmet using the practical push button.

uvex pronamic half visors

Highlights

Perfectly adapted to the uvex pronamic helmet

The peak fits the helmet perfectly and prevents the ingress of particles.

Compatible with prescription spectacles

Despite the slim design, prescription spectacles can be worn under the half visor.

Simple to change

If the visor is not needed, it can be easily removed from the helmet by pressing a push button.

Space for accessories

Even with a visor, there is still space for optional accessories with Euroslot connection.

Ready for uvex earmuffs

The optional uvex pronamic push-bayonet adapter (2600237) enables the attachment of uvex earmuffs with bayonet connection.

Additional features

The polycarbonate half visor has an anti-fog and scratch-resistant coating.

uvex pronamic full visors

The uvex pronamic full visors offer modern, advanced solutions for optimal face protection.

The click & pull system makes attaching the visor even easier. The ergonomic joint system ensures maximum wearer comfort even when the visor is worn for longer periods.

uvex pronamic full visors

Highlights

Perfectly adapted to the uvex pronamic helmet

The peak fits the helmet perfectly and prevents the ingress of particles.

Maximum freedom of movement

In the resting position, the full visor fits particularly close and optimally balanced over the body's centre of gravity.

click & pull system

The visor can be pulled off the connection system when in the release position (locking position 3 or 4) and reattached with a click.

uvex pronamic planet visors

uvex has developed the **protecting planet** product range to help raise awareness of its commitment to achieving increased sustainability. Based on the brand claim **protecting people**, our sustainable approach integrates three core pillars: **ecology, economy and social responsibility**, which are incorporated throughout the business to improve our sustainability performance. This is why uvex undertakes comprehensive audits, measurements and evaluation management processes along the entire value creation chain to ensure that its products are as sustainable as possible.

1.18kg

Calculation as at:
06/2024*

100%
mass balanced**
polycarbonate
per lens

9916000

13%
reduction in
CO₂ emissions

Visor system

- › visor lens made from 100 % mass-balanced** polycarbonate
- › over 13 percent less CO₂ emissions

Instructions for use

- › made from waste paper

Packaging

- › CO₂ offset polyester bag
- › clean disposal and return to the recycling process possible

* Calculation method: IPCC 2021 GWP 100a (based on ISO 14067) SimaPro 9.4.02 ecoinvent database 3.8. Scope: cradle-to-customer. These CO₂ values are valid at the time of calculation and may be subject to change.

** Mass balancing is an accounting method that is used, for example, for plastics to record and track mass flows along the entire value chain. In the manufacturing process, some fossil-based raw materials are replaced by more sustainable alternatives, for example through the use of biomass or recycled raw materials. The mass balancing approach enables manufacturers to verify the use of bio-based raw materials or recycled materials within a balance sheet period and to mathematically allocate the bio-based or recycled content to a proportion of the plastics produced, resulting in a material with a significantly lower CO₂ footprint. However, the exact proportion of bio-based or recycled materials in the end product can no longer be precisely determined. At uvex, mass-balanced material is used in the lenses of the planet models, enabling a significant reduction in their CO₂ footprint. By purchasing mass-balanced polycarbonate, uvex is helping to replace fossil-based raw materials with bio-based materials.

uvex

Wide range of accessories

The uvex pronamic offers maximum versatility with a wide range of accessories, including the uvex pronamic visor system, earmuffs, head torches, sun protection and much more.
