

SUXXEED OFFROAD®

The new offroad shoe range by HECKEL

Specialising in safety shoes since 1970, HECKEL is recognised for the performance, quality, and style of its products. Today, the company presents its new range of Suxceed Offroad® shoes, including a high model, a low model, and a winter boot. Completely amagnetic, lightweight, and versatile, these shoes are aimed at professionals in the building and construction industries, general industry, logistics, maintenance, utilities and work in damp environments. Available in UK sizes 3 to 14.5, the models in this range will be on sale from April 2017.

Complete protection

The Suxceed Offroad® range of safety shoes is characterised by the double density (PU 2D) PU sole, renowned for its perfect shock absorption. The sole is **non-slip** in accordance with the requirements of the SRC standard. In addition, the grooves at the rear of the sole improve **grip** when the heel first meets the ground.

Resistant to oils, hydrocarbons, and chemical products, the soles of Suxceed Offroad® safety shoes meet the specific needs of professionals in sectors such as construction, energy, logistics, maintenance, and others. Equipped with **safety reflectors**, all the models in the range ensure the wearer remains completely visible, improving their safety out in the field.

In addition, the toe caps on Suxceed Offroad® shoes protect the user from falling objects with up to 200J force and compression forces of up to 15,000N. Completely **amagnetic**, they are much lighter than standard toe caps and adapt to all morphologies whilst conducting less heat and cold.

Shoes in the Suxeed Offroad® range are also equipped with **non-metallic** puncture resistant midsole that provide the wearer with **flexibility** whilst protecting the entire surface of the foot.

Matchless comfort

Equipped with a **breathable lining** of 3D mesh, Suxeed Offroad® safety shoes are characterised by their comfort. The insoles absorb and **effectively wick perspiration**, ensuring **fast drying times** and long-term user comfort. The EVA foam insert in the heel improves **shock absorption**. The winter boot is fully lined with fleece to provide excellent thermal insulation.

The reduced number of seams at the front of the foot limits the number of pressure points when the shoes flex, and improves **resistance to penetration by liquids**.

The **outdoor look** reflects the Heckel slogan: *Performance with style*.

About HECKEL

A family company located in La Walck, Alsace, HECKEL took a decisive turn in 1948 when Joseph Heckel, a former footballer, created the first soft-toed football boot, which included the first use of screwed studs: the "2H". In 1970, HECKEL became a specialist in safety shoes.

A leading French company, HECKEL is a pioneer in the PPE sector, and over 50 years has grown to dominate the safety shoe market.

In 2001, the German group uvex, a world leader in PPE, acquired HECKEL SECURITE. Innovative and recognised for its quality products, through this partnership uvex ensured continued growth and new momentum for the company. Today HECKEL operates around three core values: performance, quality, and style.
