

The uvex logo is positioned in the top left corner of the image. It consists of the word "uvex" in a bold, lowercase, sans-serif font. The background of the entire advertisement is a photograph of a man and a woman in industrial workwear. The man, on the left, has grey hair and a beard, wears safety glasses, and holds a long metal rod. The woman, on the right, has brown hair, wears safety glasses and a quilted jacket, and gestures with her gloved hand. They are standing in front of a rusty metal wall with a large steel beam at the bottom.

Prescription Safety Eyewear

2025

protecting people

uvex WEARABILITY

The key to compliance

uvex WEARABILITY

The key to choosing prescription safety eyewear

uvex prescription safety spectacles are individually adapted to the wearer's vision while offering the best possible protection in the workplace. We call this WEARABILITY. But what do we mean by that?

WEARABILITY = Compliance. It is PPE that doesn't get in the way, allowing you to focus on the task at hand. Ultimately, it's the perfect balance of four main factors:

FIT

One size does not fit all

It may seem obvious, but properly-fitting eyewear that has been selected for the individual, their workplace and takes into account compatibility with other PPE can help avoid accidents, reduce discomfort, increase productivity and give wearers confidence.

COMFORT

With proper fit comes comfort

Safety eyewear not only protects against mechanical hazards (workplace debris and contaminants), it should be free of pressure points, lightweight, breathable and not slip. It's only when PPE fits well and is comfortable that it remains worn throughout the day.

PERFORMANCE

Industry leading technology

Our in-house expertise together with our UK based lens manufacturer, means we can provide the highest-quality prescription eyewear together with optional extras - such as lens tints and performance enhancing lens coating technology for a fundamentally different wearer experience.

STYLE

We all want to look good

Prescription safety eyewear that is high performing, comfortable and stylish means employees will not only want to wear their designated safety eyewear, but receive the same level of protection as colleagues, and protect their personal glasses from becoming damaged at work.

uvex WEARABILITY

The key to compliance

FIT

Find a frame that fits you best

uvex prescription safety spectacles are individually adapted to the wearer's vision while offering the best possible protection in the workplace. Head and facial shapes all differ requiring a range of prescription safety eyewear from which employees can select.

Adaptable features, such as nose bridges, extendable side arms and tight-fit kits, allow wearers to achieve the ultimate close fit (to keep hazards out) and find a position that means they can work comfortably, confidently and with as little distraction as possible.

COMFORT

Innovative features for comfortable protection

Decades of experience and innovative technologies form the basis for uvex products, which are manufactured in accordance with the most stringent safety standards. In addition to safety, uvex also guarantees maximum comfort and quality. Protective equipment that fits properly not only offers reliable protection, it is also more likely to be comfortable and therefore, worn by the employee.

Eyewear should deliver a low-pressure, lightweight fit with even weight distribution. Thanks to uvex's German-engineered dual-injection mould technology, we're able to combine soft and hard components into frames that flex; making them comfortable and durable, while also ensuring eyewear stays put.

PERFORMANCE

Product safety and performance

uvex prescription safety spectacles are certified and marked in accordance with EN 166, so they can be used in workplaces where safety spectacles are mandatory. As occupational safety spectacles, they not only protect the eyes (from UV radiation, flying particles, dust etc.), but are also a visual aid because the lenses have a dioptric effect.

The comprehensive uvex quality system guarantees the best design from an optical and processing technology perspective. All materials used (lenses, frames, cases etc.) are free from harmful substances and are regularly inspected.

STYLE

Style meets comfort and safety meets design

We all want to look and feel good, even at work. When 'WEARABILITY' is designed into safety eyewear, employees are more likely to keep it where it should be, on their face and in front of their eyes. It is possible for employees to have high-performing, comfortable, properly fitted specs or goggles that keeps dust and debris out, in a style and design to ensure there is something for everyone.

The wide range of uvex styles and designs of safety eyewear allows you to find the product that most suits you.

uvex Prescription

Individual personal protective equipment from uvex

ONE BRAND.
ONE VISION.
ONE MISSION.

OUR MISSION

#protecting people

The uvex brand mission. This is our objective and our responsibility. uvex protects people – when working, playing sport and pursuing leisure activities.

Decades of experience enable us to transfer expertise continuously between the sectors of industrial safety and top-level sport, and provides the foundation on which we are able to continuously develop our products.

It allows us to create innovations and solutions based on advanced technologies that reliably protect people – whether they are on a production line, on the ski slopes or on a mountain bike.

OUR FUTURE

Sustainable actions and social responsibility

If you rely on uvex, you are guaranteed sustainable actions. From environmental protection to social commitment: uvex puts corporate responsibility at the forefront of its daily business.

The focus of our commitment is to protect people:

- sustainable product concept
- avoidance of the use of hazardous substances beyond the requirements of the REACH regulation (the uvex banned hazardous substances list)
- uvex social standard for all manufacturing plants
- social commitment (e.g. Rainer Winter Foundation, Vision for the World)

CLAIM TO QUALITY

'Made in uvex'

Decades of experience and innovative technologies form the basis for products that are manufactured in accordance with the most stringent safety standards.

Our individual personal protective equipment ensures that maximum levels of safety and comfort are provided.

Our innovations set new standards in quality and technology by combining excellent wearing comfort, attractive design and sophisticated functionality.

Our motto 'Made in uvex' guarantees a comprehensive quality system and the best possible processing technology. All materials used are free from harmful substances and are regularly inspected.

uvex places great importance on a sustainable production concept with first-class products and an in-house value creation chain, with a focus on production facilities in Germany and Europe. What's more, uvex offers maximum service with maximum flexibility.

Online Ordering Process

Easier, faster and more seamless

Prescription online ordering process

uvex's online ordering system allows customers to order prescription eyewear quickly and easily. The automated system enables approved personnel (Authorising Officers) to:

- Generate a form quickly: for print or to be emailed to an employee
- Create and track the status of new prescription orders as they move through the manufacturing process: from when the Authorising Officer generates the form through to the order being despatched to the optician and finally invoiced
- Review historical orders and run user reports

The Optician's Portal

This is a great advantage to the flow and speed of the order process and will give employees a better experience when they visit the optician.

If an employee chooses a frame or a lens type which is not on your pre-approved list for selection, the optician can advise the employee straightaway. The employee will then have a choice to either choose something from the pre-approved list or to continue with the order.

If they choose the latter, uvex will seek approval as necessary. Orders will be placed on hold until approval is granted.

Once registered your Optician will be able to:

See the approved frames for your employees

Review and complete all fields to ensure timely processing

Submitted orders will go straight into production. Delays will only occur if there is a query with the order e.g. obtaining approval for non-standard items

Check the status of the order at any point once in production and advise the employee accordingly

Another advantage of the optician's portal is that uvex will be able to pay the optician for the dispensing and sight test fees by BACS payment, saving administration time and providing increased traceability.

For more information about the uvex prescription online ordering process, please visit uvex-safety.co.uk/prescription.

To speak to a member of our prescription team call 01252 725552 or email help-prescription@uvex.co.uk.

Prescription safety spectacles

Frequently Asked Questions

Frequently Asked Questions (Wearers)

01

How do I get my spectacles?

Go to your Authorising Officer/Line Manager who will generate an online order or pre-printed form and sign it. Then take this form to your chosen optician who will carry out an eye test and order your spectacles.

02

Which optician do I go to?

Your company may have chosen a designated optician to which you must go, this may well be printed on the form under "optician name". Your authorising officer will know and inform you if this is the case. If a designated optician has not been specified, then you can visit any optician of your choice. However, frames may not be available to try on.

03

How do I choose a frame?

Your company may have specified certain frames that they will allow you to wear. These will be on the form under "approved frames". If this is not the case, the complete range can be seen in this brochure from which your choice can be made. If a designated optician has been chosen, then sample frames will be available to try on.

04

What happens if the frame isn't at the opticians to try on?

Your optician can call uvex to order a sample frame. When this arrives, your optician will inform you that it has done so and will arrange a further appointment for you to try on the frame.

05

What if I have recently had an eye test?

If you have your current eye prescription details you can take these to the optician along with the uvex form and the optician will complete the form with your details and order the spectacles as normal.

06

Do I have pay for my eye test and claim it back from my company?

Provided your company pays for your eye test, uvex can arrange to pay the optician on your behalf and then invoice your company. This way, no money changes hands at the optician.

Frequently Asked Questions (Authorising officers)

01

How does my company's preferred optician access the portal?

The opticians portal is a free elective service that an optician can quickly register for.

We can work with Opticians to help use this system, offering a more efficient ordering process.

02

How can my company obtain uvex forms?

Forms are generated online or uvex can provide them free of charge with relevant information preprinted to ease the process. The Authorising Officer should complete the inside back cover of this brochure, scan and email or fax it back to uvex and we will do the rest. The more information your company can provide, the smoother the process will work.

03

What is the benefit of a designated optician?

uvex will provide your designated optician with the appropriate frames, allowing employees to try them on for style and fitting purposes. Frames need to be measured on the individual's face in order to achieve ocular precision. In addition, fees can be agreed providing consistent invoice levels.

04

How can my company set up a designated optician?

Often the company Safety Officer or Occupational Health Nurse will make arrangements with a local optician. Alternatively a uvex representative can arrange this for you.

05

Will the optician know what to do with the uvex form?

The form is quite straightforward and has all the required information on it. Generally there are no issues. However, if there are any queries, a phone call to our prescription department on 01252 725552, should solve any problems.

06

How long will the glasses take to manufacture?

From the date of entering your details on to our computer we average between 7 and 10 working days before the spectacles are completed.

Hard anti-reflective Coating

What are the benefits?

More than 80% of spectacle wearers experience unwanted reflections when indoors and outdoors

- We live in an environment with more and more light of different types, artificial light as well as natural light create annoying reflections
- Our future is filled with technologies which will make our lives even brighter....leading to a world full of reflections

Glare caused by bright lights in poorly lit environments can be just as uncomfortable for a wearer as reflections caused by bright light.

Typical situations that wearers experience reflections are:

- When working under harsh indoor LED lighting,
- Using a screen in a dimly lit office,
- Reading indoors under harsh artificial light
- When facing headlights of oncoming traffic,
- When a light source is over the wearers shoulder hitting the back surface of the lens
- When using digital displays

Example of reflections on a spectacle lens

- Reducing the reflections on a lens improves both vision and aesthetics.
- Standard lens material reflects around 8% of light, and polycarbonate material reflects approximately 10% of light.
- Enhancing the lens with an anti-reflective coating reduces reflections and increases the amount of light transmitted – resulting in clearer, sharper, crisper vision.

Benefits of the anti-reflective lens treatment

Better transmission of visual information

Reduction of ghost images

Decrease of unwanted reflections

- Better Visual Clarity
- Improved Contrast
- Better Visual Comfort
- Reduced Eye Strain
- Increased UV Protection
- Reduced glare at night time (poorly lit environments)

Prescription safety spectacles

Lenses and finishes

Lenses

Polycarbonate

- Mechanical strength 'F' (45 m/sec)
- Only partially chemical-resistant
- PC: Identification code: 2C-1.2 as per EN 170

CR39, modified (plastic)

- Mechanical strength 'S' (ball drop test)
- Lightweight organic material suitable for chemicals and painting
- Good scratch-resistance due to hard coating

Coatings

Scratch-resistant coating

To guarantee an ideal surface hardness, all our plastic lenses are given a hard coating.

Lens Tints

Tint

Tinted lenses provide effective protection against glare in areas with high light intensity (for example, sunlight)

Constant tinting

- Available in brown and grey
- Tinting levels: 82% (light), 38% (medium), 25% (medium dark), 15% (dark)

Variable tinting – Transitions

- Lenses tint automatically, depending on the UV radiation and temperature
- Tinting of between approx. 8% and 80% in brown
- Available with polycarbonate lens

uvex

Anti-fog Solutions

Essilor Optifog

Without

With Optifog

Optifog Benefits ✓

Fog repellence

Stays fog free even in extreme conditions*

Scratch resistant

Ensuring clear vision, guaranteed for 2 years

UV protection

Protects your eyes from UVA and UVB rays

Glare reduction

Less reflections for clarity of vision and improved aesthetics

Dust repellent

Repels dust particles for clearer vision and easy to clean lenses

*Internal laboratory test in extreme conditions: in cold conditions from 0 C to 23 C and in hot conditions, at 52 C for 15 seconds.

OPTiFOG®

The long-lasting anti-fog solution

Optifog's unique anti-fog system combines two patented technologies: Optifog lens treatment and a smart textile cloth with anti-fog molecules that activates the power of the Optifog lens. The Optifog lens treatment means both the front and back surfaces of the lens have integrated anti-fog technology. Simply wipe your lenses with the smart cloth and droplets that would usually obstruct your vision spread uniformly across the lens, in an invisible and fog-free layer.

How does it work?

Every day: Clean your Optifog lenses using the Optifog Smart Textile that comes with your new lenses.

Every 2 weeks: Wash your Optifog lenses with water. To avoid contamination, it is recommended to wash your glasses every time they get dirty or after they have potentially been exposed to infected agents.

Every 3 months (or after 450 activations): Renew your Optifog Smart Textile.

Before handling the Optifog Smart textile, it is recommended to wash your hands and spectacles to avoid any contamination.

Anti-fog Solutions

uvex anti-fog cloth

uvex ANTI-FOG CLOTH

The affordable anti-fog solution

Without

With uvex antifog cloth

The uvex antifog cloth provides an ideal solution for those who wish to benefit from uvex's anti-fog technology as and when they need it. Simply wipe the cloth over your lenses and an ultra-thin layer of uvex's unique anti-fog formula is applied to the lens preventing them from misting up, resulting in streak-free, clear vision for hours.

The uvex antifog cloth can be used on any lens: prescription glasses, sunglasses, industrial and sports visors, goggles or screens, and is ideal for mask wearers. The uvex antifog cloths are individually wrapped and can be carried in a handbag, toolkit or in the glovebox so you can administer anti-fog protection whenever it's needed.

For best results, we recommend to follow the instructions of use:

- Clean the glasses beforehand
- Simply wipe both sides of the lens with the uvex antifog cloth using 5-10 circular motions
- Cleaning your glasses with a standard lens cloth will affect the anti-fog performance and will need reapplying

60x

- **Cost effective** - reusable up to 60 times
- **Long-lasting** - 8 to 10 hours of anti-fog performance depending on environmental factors
- **Easy to store** - in zip bag provided, ideal for a pocket, bag or tool box

- **Less waste** - minimises waste compared to single use alternatives
- **Reusable** - once its finished its lifecycle you can use it as a general cleaning cloth

Prescription safety spectacles

Individual eye protection from uvex

**MADE FOR
YOUR EYES**
MADE IN **UVEX**

uvex prescription safety spectacles are individually adapted to the wearer's vision while offering the best possible protection in the workplace.

The spectacles are certified and marked in accordance with EN 166, so they can be used in workplaces where safety spectacles are mandatory. As occupational safety spectacles, they not only protect the eyes (from UV radiation, flying particles, dust etc.), but are also a visual aid because the lenses have a dioptric effect.

uvex offers a wide range of high-quality lens materials, focus types and frames. This makes it easier to switch between personal spectacles and employer-provided safety spectacles, which increases wearer acceptance.

The comprehensive uvex quality system guarantees the best design from an optical and processing technology perspective. All materials used (lenses, frames, cases etc.) are free from harmful substances and are regularly inspected.

uvex RX sp

Lifestyle at work

uvex RX sp frames

Make a statement with the uvex RX sp collection which stands out due to its sporty design and appealing frame colour combinations . All protection functions are fully integrated into the frame design requiring no separate side guards which is commonly the case with conventional protective spectacles.

The wraparound design offers the perfect fit and maximum protection thanks to its wide side arms and curvature of the lens. As with all uvex models, only the highest quality plastics are used in its protection.

uvex wrap lenses

We use lenses on an 8 base to match the curvature of the frame (5512 & 5513).

6109222

uvex RX sp 5513

- sporty, plastic "wraparound" design with uvex wrap lenses
- side shield and integrated brow guard frame design

uvex RX sp 5512

- Sporty, plastic “wraparound” design with uvex wrap lenses
- Supplied with uvex tight-fit-kit consisting of headband and foam seal
- Side shield and integrated brow guard frame design
- The arms can be replaced with a headband for a more secure fit when working in extreme conditions
- The foam seal guarantees a close and firm fit.
- Very good fit with anatomically adjustable, soft nose bridge
- Sporty side arms with a combination of soft and hard components ensure increased comfort and non-slip fit
- For prescription availability, please refer the options shown on pages 34 and 35

Applications in combination with the tight-fit-kit:

- Working in extreme situations, such as overhead or in confined spaces
- Working with fluids (drops) or chips and dust
- Complies with EN 166 “Protection against liquid droplets and splashes” (category “3”)

Note:

Only available in a Polycarbonate Wrap Single Vision or Varifocal lens type (compensated Rx).

We cannot supply Bifocals, Transitions or Prism, nor can we supply in CR39 lens material, only Polycarbonate.

Prescription safety inserts

uvex skyguard NT RX · uvex carbonvision RX

When a standard prescription safety frame does not give the full protection against chemical and liquid splash or dust particles; or the risk assessment specifies a goggle – uvex has the solution.

- Prescription insert fitted securely behind the goggle lens
- Both products include optimum non-allergenic seals
- The uvex skyguard NT RX features fully adjustable side arms offering low energy impact protection and enables the wearer to achieve an individual fit. Whereas, the uvex carbonvision RX goggle has a wide, adjustable elasticated headband
- Both products feature uvex's permanent anti-fog coating on the inside of the lens and a scratch resistant coating on the outside

6108200

uvex skyguard NT RX 5500

- The uvex skyguard NT prescription insert comes as a complete unit and offers wear protection against large dust particles and liquid splash
- Combining high-tech hard and soft materials the spectacle creates a soft effective seal around the eyes which is easy to clean
- The side arms can be adjusted for a secure, comfortable fit
- The uvex skyguard NT is a close fitting, wraparound spec for unobstructed vision
- Permanent uvex anti-fog lens coating on the inside, scratch resistant on the outside - Anti-fog coating does not come as standard on the prescription lenses in the insert. This is a separate request and incurs a surcharge
- The seal and prescription insert can easily be replaced
- For prescription availability, please refer the options shown on pages 30 and 31

uvex skyguard NT RX 5500

6108201

uvex carbonvision RX 5501

- The ideal choice when you require the protection level of goggle and the lowest profile of size and weight in one product
- This close fitting goggle is supplied with the uvex supravision extreme, permanent anti-fog coating on the inside, scratch resistant on the outside - Anti-fog coating does not come as standard on the prescription lenses in the insert. This is a separate request and incurs a surcharge
- Comes as a complete unit and offers wearer protection against large dust particles and liquid splash
- Easy to fit
- Provides absolute comfort with no leakage to the goggle seal due to the lack of side arms
- Combines high-tech hard and soft materials creating a soft effective seal around the eyes which is easy to clean
- For prescription availability, please refer the options shown on pages 30 and 31

uvex i-3 add

Reliable protection and optimum wearer comfort

Optimum protective eyewear means improved, safe vision.

uvex i-3 add safety spectacles have invisible integrated dioptr correction for near vision. Strain on the eyes is effectively reduced (e.g. when reading) and the patented lens technology ensures an instant high level of compatibility for wearers. At the same time, the uvex i-3 add spectacles provide secure protection and optimal comfort.

Variable side arm inclination

The 5-position side arm inclination allows individual adjustment and optimum coverage of the eyes.

Addition

Two models are available for individualised correction of near vision. (+1.0 dpt. and +2.0 dpt.)

Flexible nose loops

The extremely soft adjustable Softflex nose loops ensure a secure fit and can be individually adapted to sit comfortably on the nose.

uvex supravision excellence

The uvex supravision excellence coating guarantees extreme scratch resistance on the outside and permanent anti-fogging properties on the inside.

MADE IN GERMANY

Patent no.: DE 10 2012 207 384

Perfection in every detail

The patented lens technology makes it possible to integrate two progression zones for near vision on the inside of the duospherical single lens safety spectacles. The correction strength at the bottom of the lenses is +1.0 or +2.0, depending on the model. A distinctive feature and unique selling point is that the patented manufacturing technology means the front area and consequently the base curve of the lenses are not altered.

This combines extremely good coverage and fit, all the way to the edge, together with the benefits of a progressive lens on the inside area. A further benefit is that the progressive zone is not visible and that these spectacles comply with all standards of EN norms that are relevant to safety.

optical lens designed by
optiswiss
original since 1937

Progression zones

This diagram of the lenses shows the large zone that does not feature any optical correction. The transparent, integrated optical correction starts in the region of the middle and the strength increases gradually towards the lower edge of the lenses. The correction strength of the spectacles is +1.0 or +2.0, depending on the model.

The free-form lens is manufactured in accordance with standard parameters and designed for a distance of approximately 64 mm between the eyes. These safety spectacles do not permanently replace prescription safety spectacles.

VDU spectacles

Individual eye protection at the screen

**MADE FOR
YOUR EYES**
MADE IN UVEX

uvex VDU spectacles are specially designed for working at a screen, enabling problem-free vision at a computer workstation.

The special feature of VDU spectacles is the distance for which they have been optimised. Normally, the lens is designed for a viewing distance of approximately 30 cm (reading distance) to correct presbyopia. A screen is usually about 50 cm – 80 cm away from the human eye.

To be able to focus continuously at different distances, spectacle wearers are forced to adopt an unnatural head position and body posture. This can lead to a variety of posture-related symptoms, such as overexertion of

the shoulder and neck muscles, fatigue symptoms or headaches. For most people who wear reading glasses or varifocals in their everyday lives, VDU spectacles are recommended if the main activity in their job requires viewing a computer screen and safety spectacles are not mandatory in the workplace.

uvex offers different lens materials, focus types and frames for VDU spectacles. The 'Made in uvex' quality system guarantees the best design from an optical and processing technology perspective. All materials used are free from harmful substances and are regularly inspected.

The collection

uvex offers different frames for VDU spectacles. Numerous models are available as metal or plastic frames. See pages 25-26.

Metal frames

Prescription safety spectacles

Certification and marking

Certification

Individually manufactured uvex prescription safety spectacles are tested and certified by independent testing institutes at regular intervals according to the requirements of EN 166.

Marking of lenses in accordance with EN 166

Note: Due to the mandatory marking, it is not possible to purchase frames without lenses. Please do not modify the completed spectacles in a way that reduces their protective function.

Prescription safety spectacles

Certification and marking

Marking

- Frame and lenses are permanently marked
- If the markings on the lens and frame are different, the lower mechanical strength applies to the entire eye protection device
- According to the PPE regulation, uvex prescription safety spectacles must be marked with the factory symbol and production date:  MM/YYYY

Marking in accordance with EN 166 on the lens and inside of the frame

Marking of the frame in accordance with EN 166
