uvex rubiflex S

The comfortable all-rounder

MADE IN GERMANY

Industry | Painting | Agriculture | Home and garden

protecting people

uvex

The uvex rubiflex S series offers a unique combination of:

Comfort

Every single model in the uvex rubiflex range stands for ergonomic fit and excellent wearer comfort thanks to the high level of moisture absorption offered by the cotton lining, which helps to prevent moisture build-up inside the glove.

Safety

The supported safety glove provides effective protection when working with substances such as greases, mineral oils and a wide range of chemicals. The uvex rubiflex S XG with innovative Xtra Grip coating ensures excellent grip. In this way, tools and machines can be operated safely at all times.

Sustainability

The rubiflex safety gloves are manufactured at the uvex site in Lüneburg – producing high-quality occupational health and safety "Made in Germany".

MADE IN GERMANY

uvex rubiflex S XG
Also available with uvex Xtra Grip technology for even better grip

Fully coated with special NBR coating (nitrile rubber)

Fabric free from harmful substances
Certified in line with OEKO-TEX® Standard 100

Precise working

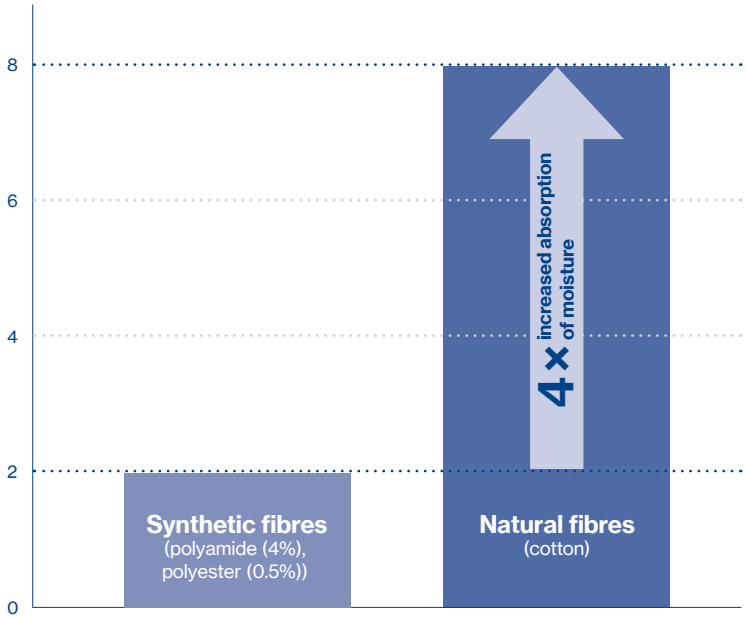
The uvex rubiflex S fits perfectly on the hand. Its ergonomic design guarantees an optimal fit.

No fatigue

The ergonomic shape of the uvex rubiflex S saves the wearer effort and increases wearer acceptance.

Active protection for the skin

The cotton lining absorbs four times more moisture than synthetic fibres (polyamide/ polyester), ensuring that the wearer's skin stays dry and the gloves feel comfortable and natural to wear.



Relative moisture absorption of fibres [%] at 65% RH and 20°C

uvex rubiflex S

a versatile product

Industry
Maintenance and service tasks, production, handling chemicals

Automotive industry
Painting work

Home and garden
Cleaning and renovation, handling tools

Agriculture
Cleaning and disinfecting animal enclosures, handling crop protection products

Change your safety gloves regularly.

It is vital to change your safety gloves before hazardous substances are able to penetrate the glove membrane. This penetration by hazardous substances at a molecular level is called permeation.

For example, the maximum permeation time after contact with chemicals is >480 minutes. More information about handling hazardous substances safely can be found in the relevant safety data sheets.

uvex

Sustainability

uvex safety gloves in Lüneburg is the central hub for hand protection expertise and technology within the uvex safety group.

uvex safety gloves, Lüneburg (Germany)
uvex's hand protection solutions are produced according to stringent technological and sustainability standards.

Made in Germany
This location is not just beneficial for sustainability, at a time when global resources are scarce and transport capacities are limited around the world, it also makes a real difference to product availability and delivery.

Installation of a block-type thermal power plant
In July 2021, the construction of a block-type thermal power plant at the Lüneburg site was completed. This plant will reduce CO_2 emissions by 300 tonnes per year by allowing the electrical energy it generates (250 kW/h) and its engine waste heat (269 kW/h) to be used in the production process. The block-type thermal power plant already meets the emission targets required by law from 01/01/2024 and is therefore one of the first cogeneration plants in Germany to comply with this standard.

Sustainability measures being taken by the uvex safety group

We have been protecting people in sports, leisure and at work with our innovative products since 1926. Any company wanting to protect people must accept the responsibility that comes with it. It is exactly this mission that instils our commitment to work sustainably and with social responsibility.
