

Optimally secure fit. Fog-free spectacles.

The uvex silv-Air lite protective mask has an impressive optimally secure fit, which effectively prevents spectacles from fogging up.

Safety risk:
Fogged-up lenses
from a protective mask
without a secure fit

Ideal for use with spectacles: The uvex silv-Air lite FFP2 protective mask ensures a secure fit similar to that of an FFP3 protective mask – as independent tests have shown. This significantly reduces fogging when the protective mask is worn with spectacles.

Respiratory protection “Made in Europe”

The uvex silv-Air lite is a joint European project: The manufacturing expertise, production equipment and filter materials come from Germany, while the protective masks are produced by a uvex partner in France.

This European project does not just guarantee first-class product quality: Procuring all components locally means that suppliers are not reliant on East Asia and therefore ensures rapid availability of the flat-fold mask.

The excellent secure fit around the nose area and high compatibility with uvex eyewear products effectively keep spectacles from fogging up

Horizontal seams for stability

Enlarged filter surface and large mask interior

The protective mask that “breathes” with the wearer

Thanks to its innovative design, the uvex silv-Air lite retains its shape, allowing the mask to “breathe” with the wearer and effectively preventing it from collapsing.

The enlarged filter surface and large mask interior significantly reduce breathing resistance, for reliable protection and optimal wearing comfort with every use.

For the perfect fit, every time

Thanks to the soft material and the individually adjustable nose clip, the uvex silv-Air lite adapts optimally to any facial shape for a perfect all-round seal and a comfortable fit.

Thanks to the sophisticated design in the nose area, the uvex silv-Air lite can be combined with uvex safety spectacles and effectively keeps the spectacles from fogging up – its high level of compatibility makes it a dependable companion in everyday work.

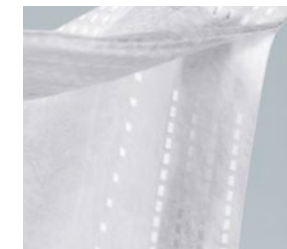

Optimal hygiene

Each uvex silv-Air lite protective mask is individually packaged to meet even the strictest hygiene requirements. The volume of the optimised packaging has been reduced by 22% compared to conventional masks, which saves space during transport and storage.

Lightweight and comfortable

Soft material
Premium comfort for better wearer acceptance – with an optimally sealed fit.

Only weighs seven grams
The low-weight material blend makes the uvex silv-Air lite a real featherweight.

Adjustable nose clip
The integrated nose clip can be adjusted to suit the wearer for perfect protection.

Sturdy design keeps its shape
The two-piece horizontally folding shape effectively prevents the mask from collapsing.
