uvex

Safe.
Innovative.
Robust.

The uvex 2 construction has been developed to meet the specific challenges of the construction and engineering industries - where workers and their footwear are put to the test, tackling high mechanical stress, and extreme weather conditions.

The upper offers excellent resistance to water and dirt and has been made using as few seams as possible. The design of the tongue prevents water and dirt from entering the boot. The uvex 2 construction is made from leather featuring our new uvex waterstop technology, to protect against water penetration for 4 times longer than required by the European standard - keeping your feet protected and dry throughout the entire working day, and without compromising breathability. The shoe is rounded off by a PU scuff cap, reflective strips on each side and extremely strong laces.

The sole of the boot features the tried-and-tested uvex 2 PU/PU sole with foamed scuff cap, self-cleaning deep tread and anti-twist heel basket to keep your feet safe and stable, especially when working outdoors. In addition to excellent cushioning properties, the uvex 2 construction boot also has a penetration-resistant steel midsole that protects against nails and sharp objects.

Stability and ankle protection

The anatomically shaped heel basket provides stability and protection against twisted ankles, especially on uneven surfaces.

Increased visibility

Reflective side strips provide optimal visibility and safety, especially in poorly lit working environments.

Safe slip resistance

The rough, self-cleaning tread ensures perfect grip without slipping, even on ladders or smooth surfaces.

uvex waterstop technology

uvex waterstop technology reliably protects against water penetration for four times longer than required by the standard.

65122

uvex 2 construction	Lace-up boot
Art. no.	65122
Standard	EN ISO 20345:2011 S3 SRC
Upper	water repellent leather
Lining	textile
Toe cap	metal-free
Penetration-resistant midsole	steel
Sizes	35 to 52
Order unit	PR

clima zone

► To ensure a proper fit for both men and women, sizes 3-6.5 have been produced using a last which mimics the contours of the female foot to deliver the perfect fit and optimum comfort.

Specifications

- Robust, lightweight, S3 safety boot with penetration-resistant steel midsole
- Water-repellent leather and uvex waterstop technology keeps feet dry
- Anatomical, moulded polyurethane heel basket for stability and protection against ankle twisting
- 100% metal-free toe cap - compact design, anatomical shape, good lateral stability and no thermal conductivity
- Ergonomically designed outsole made from dual-density polyurethane with a rough, self-cleaning tread for excellent slip resistance
- Secure grip when climbing ladders thanks to the stabilising arch support
- Reflective side strips for optimum visibility to others
- Removable anti-static comfortable insole with a moisture transport system. Wicks away sweat for better comfort and hygiene.
- Insole features additional shock absorption around the heel and forefoot
- Soft padding on dust tongue and collar
- Free from harmful substances according to our restricted substances list which exceeds the norm

uvex

The essential allrounder.
Safe. Innovative. Robust.

► Thanks to an intelligent design and innovative technologies, the uvex 2 construction provides reliable protection, stability and exceptional comfort.
